# 1 Introduction

## 1.1 Revision History

This is the first version of the document. There are no previous versions.

Revision	Last Edited	Changes
1.0	21/01/2016	Document redaction

## 1.2 Purpose and Scope

The Test Plan Document (ITPD) describes the plan to accomplish the integration test. This document is supposed to be written before the integration test really happens and takes the architectural description of the software system as a starting point, for this reason it is often redacted in parallel with the Design Document. It explain to the development team what to test, in which sequence, which tools are needed for testing (if any), which stubs/drivers/oracles need to be developed.

The purpose of integration testing is to verify functional, performance, and reliability requirements of individual software modules of the product when they are combined and tested as a group; i.e., units (or groups of units) are exercised through their interfaces. The aim is to test the modules interactions incrementally, with success and error cases being simulated via appropriate parameter and data inputs. Simulated usage of shared data areas and inter-process communication is tested and individual subsystems are exercised through their input interface. Test cases are constructed to test whether all the components interact correctly, for example across procedure calls or process activations.

This is done after testing individual modules, i.e., unit testing; the overall idea is a "building block" approach, in which verified assemblages are added to a verified base which is then used to support the integration testing of further assemblages up to the complete final system (the testing on the complete system is not part of this integration testing phase).

## 1.3 List of Definitions and Abbreviations

The following acronyms are used in this document:

- RASD: Requirements Analysis and Specification Document
- DD: Design Document
- DB: DataBase

The following definitions are used in this document:

- Driver: are considered dummy modules which are always distinguished as "calling programs that are handled in bottom up integration testing; they are only used when main programs are under construction.
- Stub: in computer science, test stubs are programs that simulate the behaviors of software components (or modules) that a module undergoing tests depends on. Test stubs are mainly used in incremental testing's top-down approach.
- Oracle: in computing, software testers and software engineers can use an oracle as a mechanism for determining whether a test has passed or failed. The use of oracles involves comparing the output(s) of the system under test, for a given test-case input, to the output(s) that the oracle determines that product should have.

## 1.4 List of Reference Documents

- Specification document: myTaxiService project
- Requirements Analysis and Specification Document (RASD) for myTaxiService
- Design Document (DD) for myTaxiService

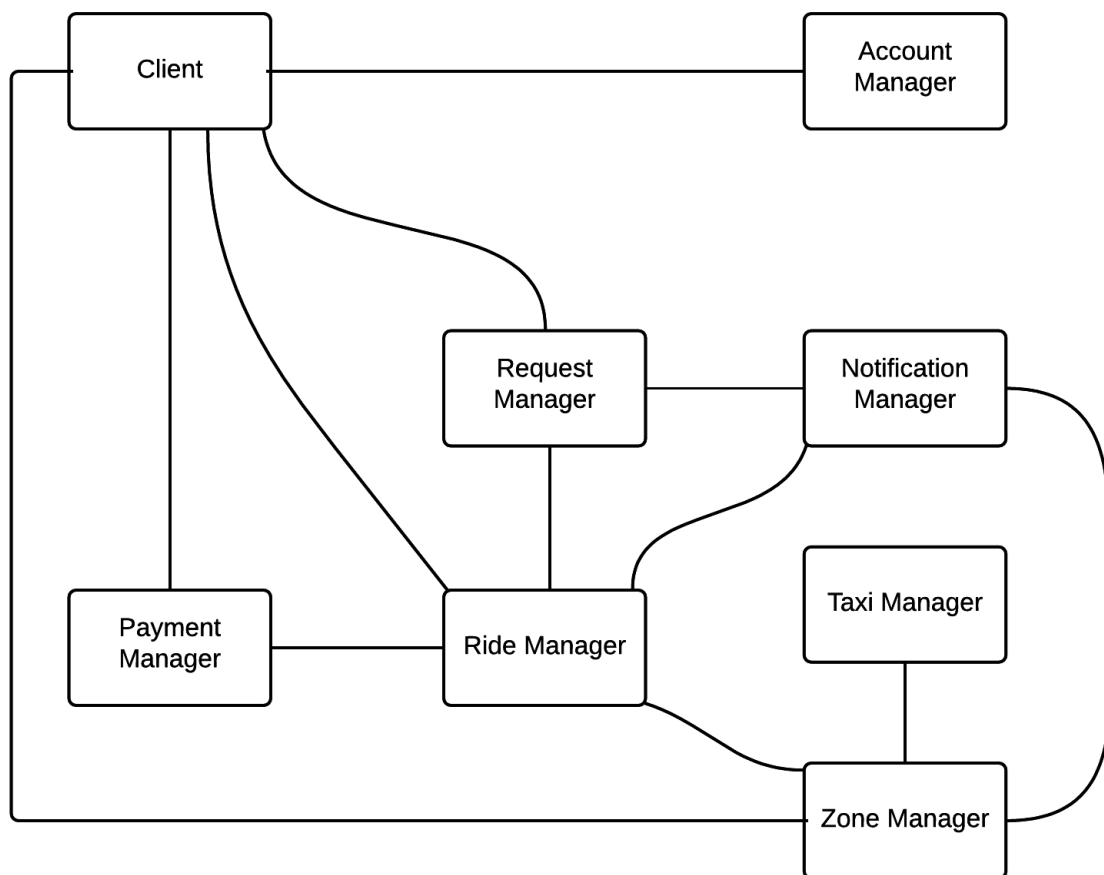

## 2 Integration Strategy

### 2.1 Entry Criteria

It is supposed that the unit testing phase has already been completed successfully.

### 2.2 Elements to be Integrated

The scheme below show the main high level components of the system.

From test I1 up to test I7 the integration is related to sub-systems.  
Starting from I8 tests will be focused on integration of higher level components.

ID	Integration Test	Paragraphs		
I1	Login Manager →Account Factory	2.4.1	3.1.1	3.2.1
I2	Profile Manager →Login Manager	2.4.1	3.1.1	3.2.1
I3	Request Handler →Request Worker	2.4.2	3.1.2	3.2.2
I4	Request Worker →Request Engine	2.4.2	3.1.2	3.2.2
I5	Ride Handler →Ride Worker	2.4.3	3.1.3	3.2.3
I6	Ride Worker →Ride Engine	2.4.3	3.1.3	3.2.3
I7	Zone Engine →Queue Manager	2.4.4	3.1.4	3.2.4
I8	Client →Account Manager	2.4.5	3.1.5	
I9	Client →Payment Manager	2.4.5	3.1.6	
I10	Client →Request Manager	2.4.5	3.1.7	
I11	Client →Ride Manager	2.4.5	3.1.8	
I12	Client →Zone Manager	2.4.5	3.1.9	
I13	Request Manager →Ride Manager	2.4.6	3.1.10	
I14	Request Manager →Notification Manager	2.4.6	3.1.11	
I15	Ride Manager →Zone Manager	2.4.7	3.1.12	
I16	Ride Manager →Payment Manager	2.4.7	3.1.13	
I17	Ride Manager →Notification Manager	2.4.7	3.1.14	
I18	Zone Manager →Taxi Manager	2.4.8	3.1.15	
I19	Zone Manager →Notification Manager	2.4.8	3.1.16	

## 2.3 Integration Testing Strategy

The bottom-up approach will be used to accomplish the analysis. This means that first the interactions inside the sub-systems of the components will be considered and consequently the integrations between the components themselves.

## 2.4 Sequence of Component/Function Integration

### 2.4.1 Sequence of integration for Account Manager sub-system

### 2.4.2 Sequence of integration for Request Manager sub-system

### 2.4.3 Sequence of integration for Ride Manager sub-system

### 2.4.4 Sequence of integration for Zone Manager sub-system

### 2.4.5 Sequence of integration for Client

#### 2.4.6 Sequence of integration for Request Manager

#### 2.4.7 Sequence of integration for Ride Manager

#### 2.4.8 Sequence of integration for Zone Manager

### 3 Individual Steps and Test Description

#### 3.1 Test Case Specifications

##### 3.1.1 Integration tests for Account Manager

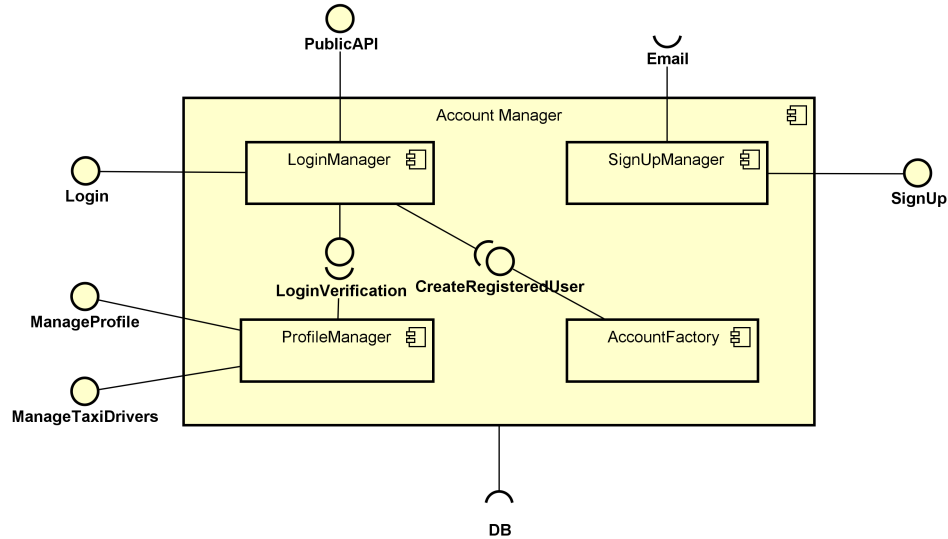

Figure taken from paragraph 2.3.1 of the DD

<b>Test case identifier</b>	I1
<b>Test item(s)</b>	Login Manager → Account Factory
<b>Input specification</b>	Create typical Login Manager input
<b>Output specification</b>	Check if the correct methods are called in the Account Factory
<b>Environmental needs</b>	Client driver

<b>Test case identifier</b>	I2
<b>Test item(s)</b>	Profile Manager → Login Manager
<b>Input specification</b>	Create typical Profile Manager input
<b>Output specification</b>	Check if the correct functions are called in the Login Manager
<b>Environmental needs</b>	Client driver

## 3.1.2 Integration tests for Request Manager

Figure taken from paragraph 2.3.2 of the DD

<b>Test case identifier</b>	I3
<b>Test item(s)</b>	Request Handler →Request Worker
<b>Input specification</b>	Create typical Request Handler input
<b>Output specification</b>	Check if the correct functions are called in the Request Worker
<b>Environmental needs</b>	Client (Passenger) driver to simulate a typical communication input (creation or modification of request/reservation), the stubs for Ride Manager and Notification Manager to satisfy the components inter-dependencies

<b>Test case identifier</b>	I4
<b>Test item(s)</b>	Request Worker →Request Engine
<b>Input specification</b>	Create typical Request Worker input
<b>Output specification</b>	Check if the correct functions are called in the Request Engine
<b>Environmental needs</b>	I3 succeeded, the stub for the DB to satisfy the component inter-dependencies

## 3.1.3 Integration tests for Ride Manager

Figure taken from paragraph 2.3.3 of the DD

<b>Test case identifier</b>	I5
<b>Test item(s)</b>	Ride Handler → Ride Worker
<b>Input specification</b>	Create typical Ride Handler input
<b>Output specification</b>	Check if the correct functions are called in the Ride Worker
<b>Environmental needs</b>	Request Manager driver to simulate a typical communication input (creation or modification of ride), the stubs for Payment Manager, Zone Manager and Notification Manager to satisfy the components inter-dependencies

<b>Test case identifier</b>	I6
<b>Test item(s)</b>	Ride Worker → Ride Engine
<b>Input specification</b>	Create typical Ride Worker input
<b>Output specification</b>	Check if the correct functions are called in the Ride Engine
<b>Environmental needs</b>	I5 succeeded, the stub for the DB to satisfy the component inter-dependencies

### 3.1.4 Integration tests for Zone Manager

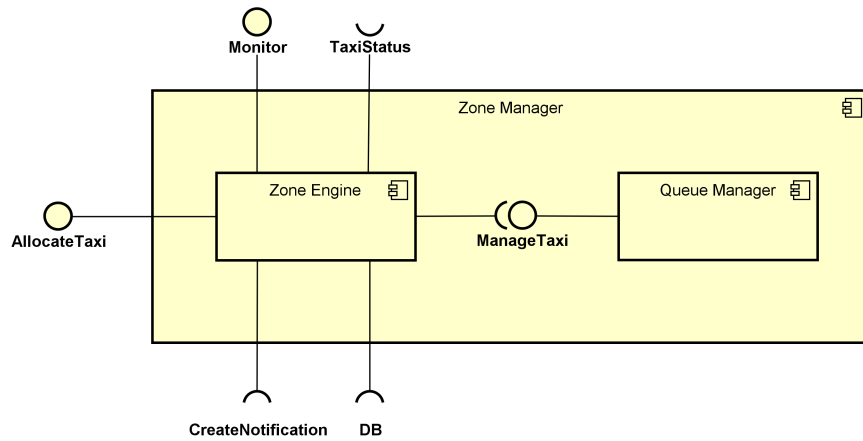

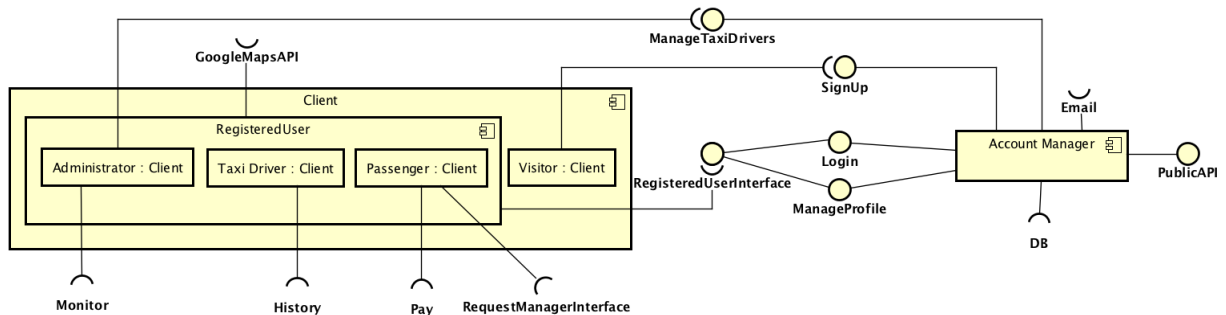

Figure taken from paragraph 2.3.6 of the DD

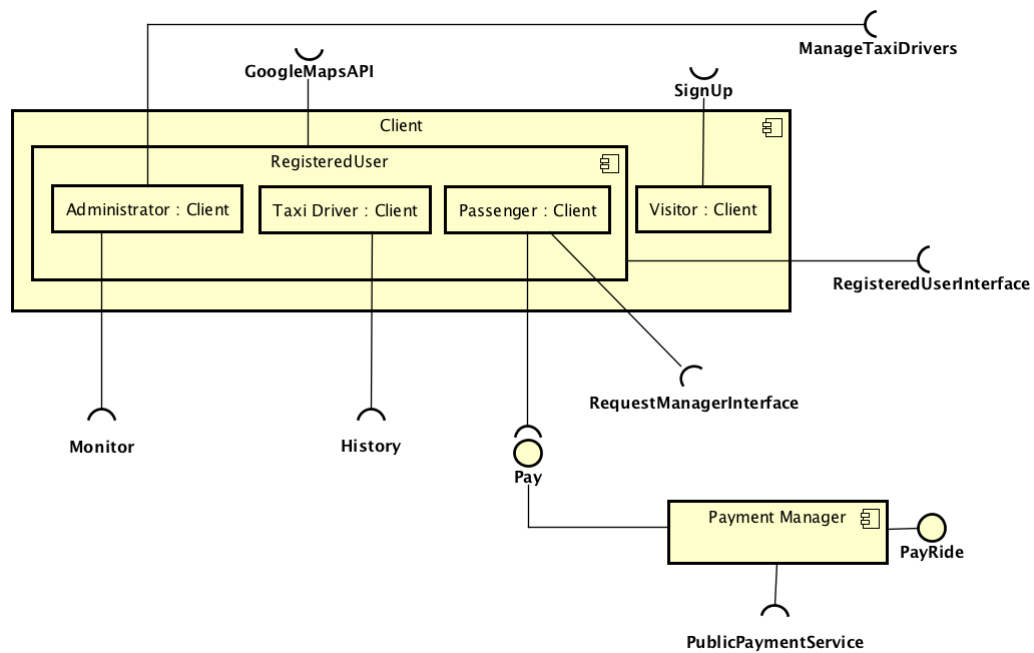

<b>Test case identifier</b>	I7
<b>Test item(s)</b>	Zone Engine → Queue Manager
<b>Input specification</b>	Create typical Zone Engine input
<b>Output specification</b>	Check if the correct functions are called in the Queue Manager
<b>Environmental needs</b>	Ride Manager driver to simulate a typical communication input (allocation of taxis), the stubs for Taxi Manager, DB and Notification Manager to satisfy the components inter-dependencies

### 3.1.5 Integration tests for Client and Account Manager

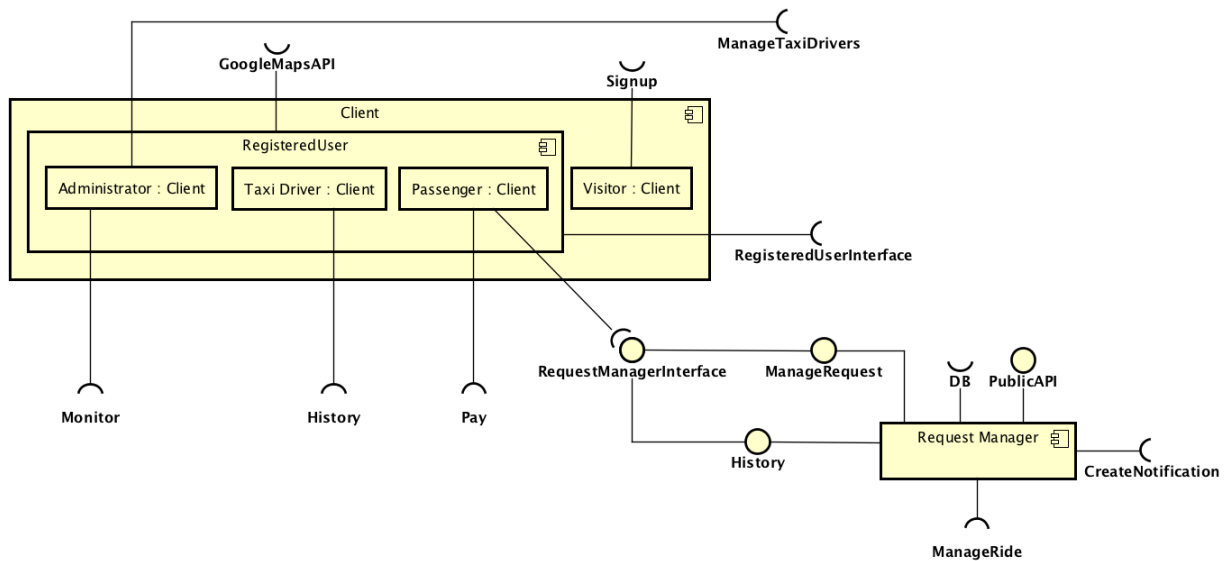

<b>Test case identifier</b>	I8
<b>Test item(s)</b>	Client → Account Manager
<b>Input specification</b>	Create typical Client input
<b>Output specification</b>	Check if the correct functions are called in the Account Manager
<b>Environmental needs</b>	I1, I2 succeeded, the stub for DB and Notification Manager to satisfy the components inter-dependencies stubs Client???

### 3.1.6 Integration tests for Client and Payment Manager

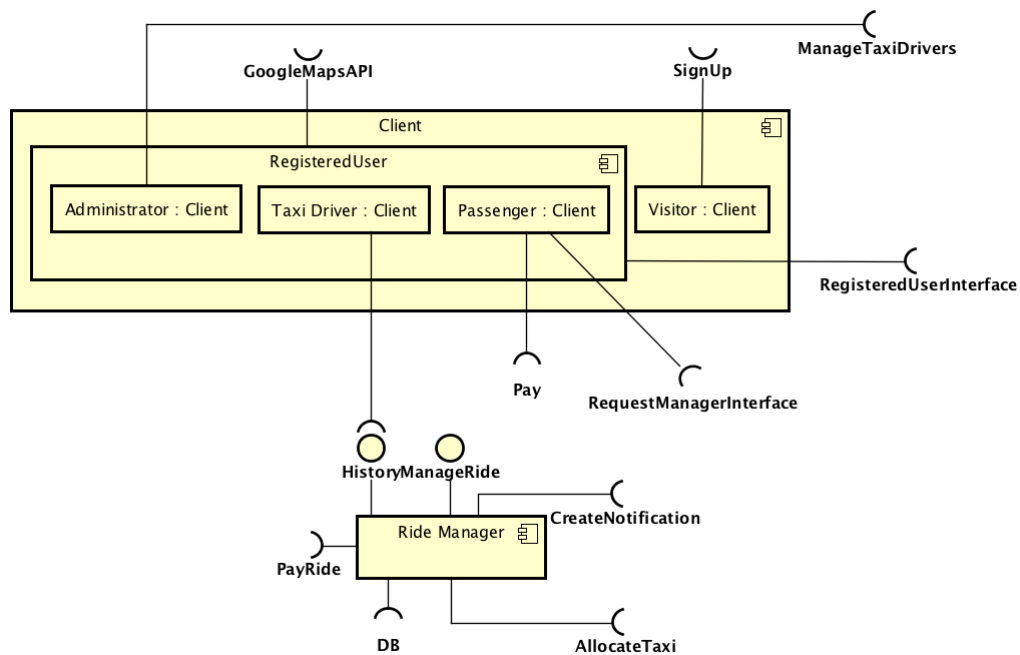

<b>Test case identifier</b>	I9
<b>Test item(s)</b>	Client →Payment Manager
<b>Input specification</b>	Create typical Client input
<b>Output specification</b>	Check if the correct functions are called in the Payment Manager
<b>Environmental needs</b>	The stubs for <b>Account Manager</b> and Public Payment Service to satisfy the components inter-dependencies <b>stubs Client???</b>

### 3.1.7 Integration tests for Client and Request Manager

Test case identifier	I10
Test item(s)	Client →Request Manager
Input specification	Create typical Client input
Output specification	Check if the correct functions are called in the Request Manager
Environmental needs	I3, I4 succeeded, the stubs for Account Manager, DB, Ride Manager and Notification Manager to satisfy the components inter-dependencies stubs Client???

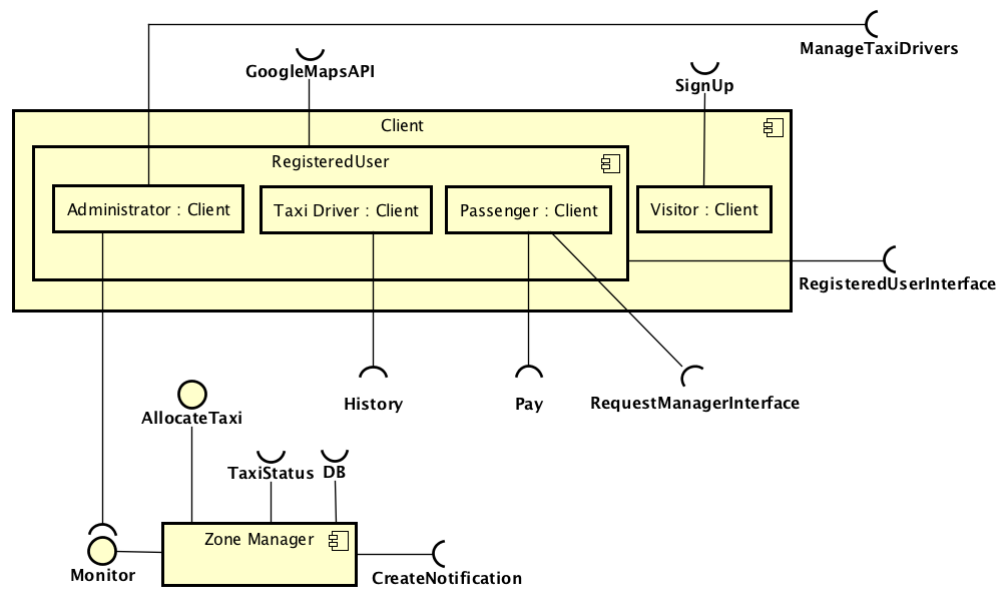

### 3.1.8 Integration tests for Client and Ride Manager

Test case identifier	I11
Test item(s)	Client → Ride Manager
Input specification	Create typical Client input
Output specification	Check if the correct functions are called in the Ride Manager
Environmental needs	I5, I6 succeeded, the stubs for <b>Account Manager</b> , DB, Payment Manager, Zone Manager and Notification Manager to satisfy the components inter-dependencies stubs Client???

### 3.1.9 Integration tests for Client and Zone Manager

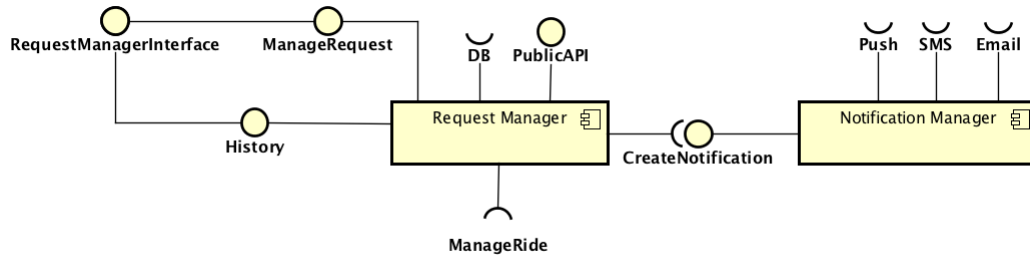

Test case identifier	I12
Test item(s)	Client → Zone Manager
Input specification	Create typical Client input
Output specification	Check if the correct functions are called in the Zone Manager
Environmental needs	I7 succeeded, the stubs for Account Manager, DB, Taxi Manager and Notification Manager to satisfy the components inter-dependencies stubs Client???

### 3.1.10 Integration tests for Request Manager and Ride Manager

<b>Test case identifier</b>	I13
<b>Test item(s)</b>	Request Manager → Ride Manager
<b>Input specification</b>	Create typical Request Manager input
<b>Output specification</b>	Check if the correct functions are called in the Ride Manager
<b>Environmental needs</b>	I3, I4, I5, I6 succeeded, the stubs for DB, Notification Manager, ZoneManager and Payment Manager to satisfy the components inter-dependencies

### 3.1.11 Integration tests for Request Manager and Notification Manager

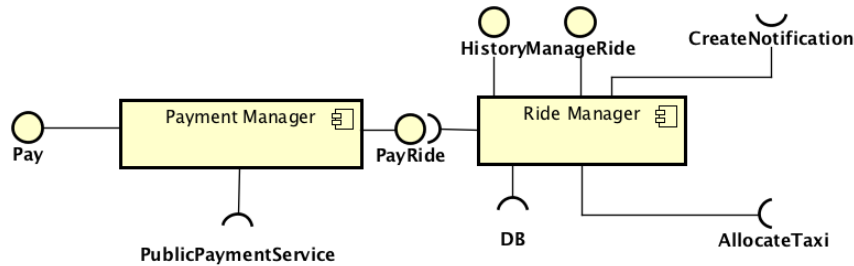

<b>Test case identifier</b>	I14
<b>Test item(s)</b>	Request Manager → Notification Manager
<b>Input specification</b>	Create typical Request Manager input
<b>Output specification</b>	Check if the correct functions are called in the Notification Manager
<b>Environmental needs</b>	I3, I4 succeeded, the stubs for DB, Ride Manager, SMS, Email and Push notification to satisfy the components inter-dependencies

### 3.1.12 Integration tests for Ride Manager and Zone Manager

<b>Test case identifier</b>	I15
<b>Test item(s)</b>	Ride Manager →Zone Manager
<b>Input specification</b>	Create typical Ride Manager input
<b>Output specification</b>	Check if the correct functions are called in the Zone Manager
<b>Environmental needs</b>	I5, I6, I7 succeeded, the stubs for DB, Payment Manager, Notification Manager and Taxi Manager to satisfy the components inter-dependencies

### 3.1.13 Integration tests for Ride Manager and Payment Manager

<b>Test case identifier</b>	I16
<b>Test item(s)</b>	Ride Manager →Payment Manager
<b>Input specification</b>	Create typical Ride Manager input
<b>Output specification</b>	Check if the correct functions are called in the Payment Manager
<b>Environmental needs</b>	I5, I6 succeeded, the stubs for Public Payment Service, DB, Zone Manager and Notification Manager to satisfy the components inter-dependencies

### 3.1.14 Integration tests for Ride Manager and Notification Manager

Test case identifier	I17
Test item(s)	Ride Manager → Notification Manager
Input specification	Create typical Ride Manager input
Output specification	Check if the correct functions are called in the Notification Manager
Environmental needs	I5, I6 succeeded, the stubs for Payment Manager, DB, Zone Manager, SMS, Email and Push notification to satisfy the components inter-dependencies

### 3.1.15 Integration tests for Zone Manager and Taxi Manager

Test case identifier	I18
Test item(s)	Zone Manager → Taxi Manager
Input specification	Create typical Zone Manager input
Output specification	Check if the correct functions are called in the Taxi Manager
Environmental needs	I7 succeeded, the stubs for DB and Notification Manager to satisfy the components inter-dependencies

## 3.1.16 Integration tests for Zone Manager and Notification Manager

<b>Test case identifier</b>	I19
<b>Test item(s)</b>	Zone Manager → Notification Manager
<b>Input specification</b>	Create typical Zone Manager input
<b>Output specification</b>	Check if the correct functions are called in the Notification Manager
<b>Environmental needs</b>	I7 succeeded, the stub for DB, Taxi Manager, SMS, Email and Push notification to satisfy the components inter-dependencies

## 3.2 Test procedures

## 3.2.1 Test procedure for Account Manager sub-system

<b>Test procedure identifier</b>	TP1
<b>Purpose</b>	<p>This test verifies that the Account Manager component:</p> <ul style="list-style-type: none"> <li>• Can handle the Visitor input</li> <li>• Can handle the Registered User input</li> <li>• Can output the requested information to a Visitor</li> <li>• Can output the requested information to a Registered User</li> <li>• Can retrieve the correct information about a user</li> </ul>
<b>Procedure steps</b>	Execute I2 after I1

**3.2.2 Test procedure for Request Manager sub-system**

<b>Test procedure identifier</b>	TP2
<b>Purpose</b>	<p>This test verifies that the Request Manager component:</p> <ul style="list-style-type: none"><li>• Can handle the Passenger input (creation/modification of requests/reservations and user's history)</li><li>• Can handle the Passenger input from an external service through the APIs</li><li>• Can output the requested information to a Passenger</li><li>• Can start a thread for every user's request</li><li>• Can modify and delete requests, thus it can retrieve information about the requests from the DB</li><li>• Can retrieve the correct information about a user</li></ul>
<b>Procedure steps</b>	Execute I4 after I3

**3.2.3 Test procedure for Ride Manager sub-system**

<b>Test procedure identifier</b>	TP3
<b>Purpose</b>	<p>This test verifies that the Ride Manager component:</p> <ul style="list-style-type: none"><li>• Can handle the creation, modification and cancellation of rides</li><li>• Can start a thread for every user's ride</li><li>• Can handle the Taxi driver's input</li><li>• Can output the requested information to a Taxi driver</li><li>• Can retrieve information about the rides from the DB</li><li>• Can retrieve the correct information about a user</li></ul>
<b>Procedure steps</b>	Execute I6 after I5

#### 3.2.4 Test procedure for Zone Manager sub-system

<b>Test procedure identifier</b>	TP4
<b>Purpose</b>	<p>This test verifies that the Zone Manager component:</p> <ul style="list-style-type: none"><li>• Can handle the Administrator input</li><li>• Can output the requested information to the Administrator</li><li>• Can manage the queues of taxis in the zones</li><li>• Can forward a request to the correct queue</li><li>• Can retrieve information about the queues from the DB</li><li>• Can retrieve the correct information about a user</li></ul>
<b>Procedure steps</b>	Execute I7

### 3.2.5 Test procedure for components involved in User login

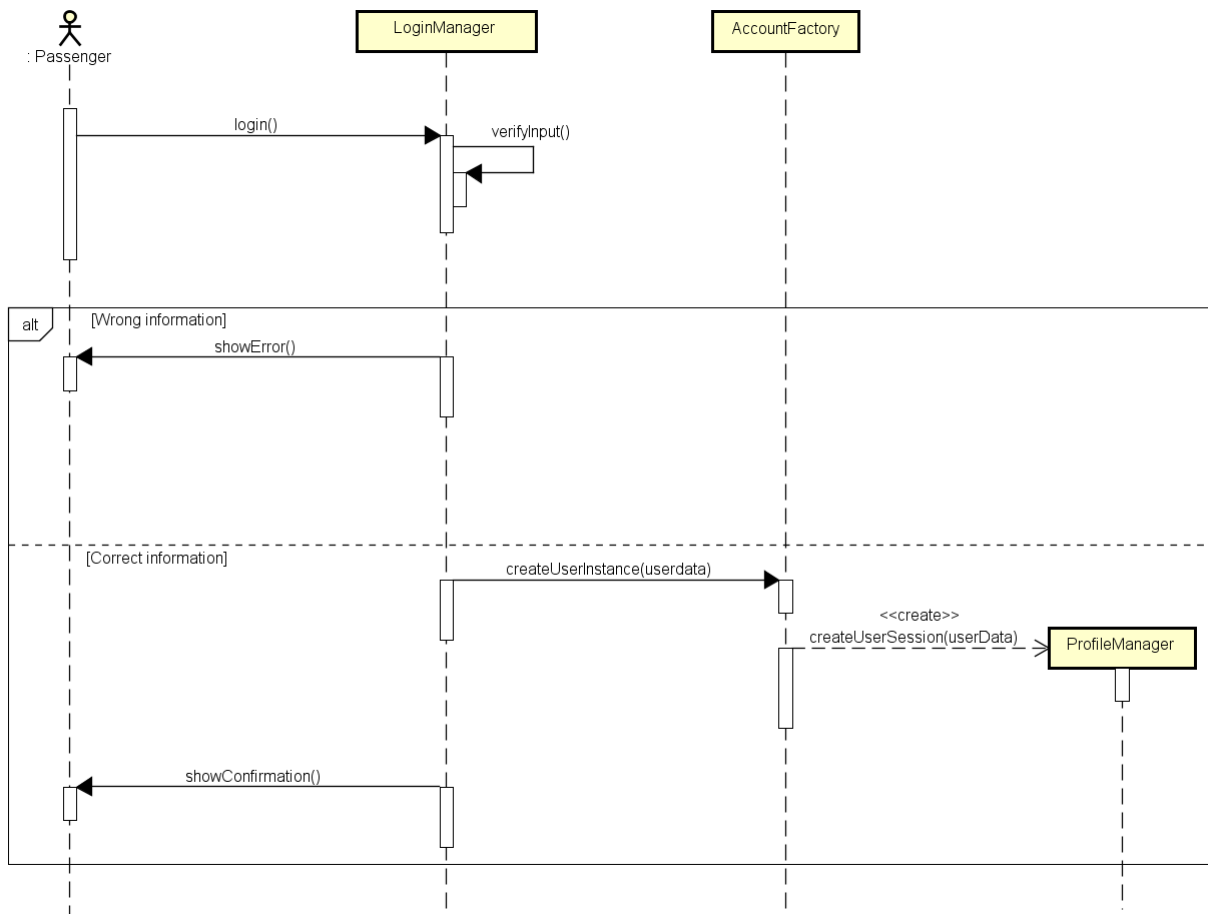

Figure taken from paragraph 2.5.2.1 of the DD

Test procedure identifier	TP5
---------------------------	-----

### 3.2.6 Test procedure for components involved in Passenger request

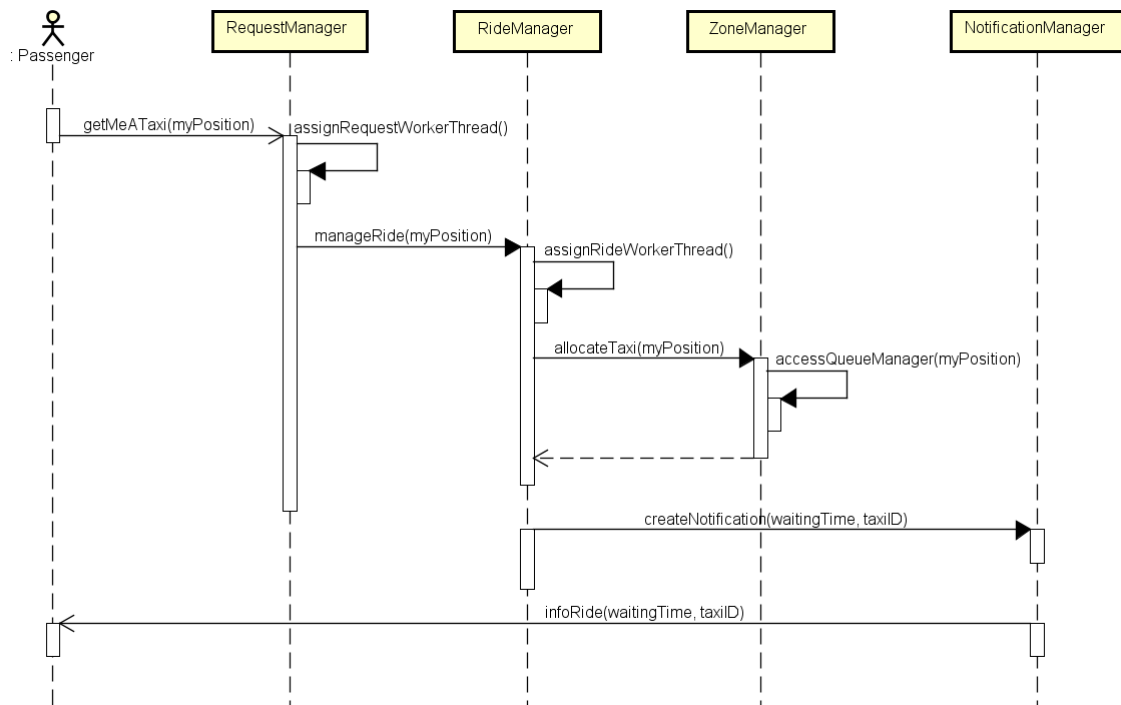

Figure taken from paragraph 2.5.2.2 of the DD

Test procedure identifier	TP6
---------------------------	-----

### 3.2.7 Test procedure for components involved in Request cancellation

Figure taken from paragraph 2.5.2.3 of the DD

Test procedure identifier	TP7
---------------------------	-----

### 3.2.8 Test procedure for components involved in Driver's job assignment

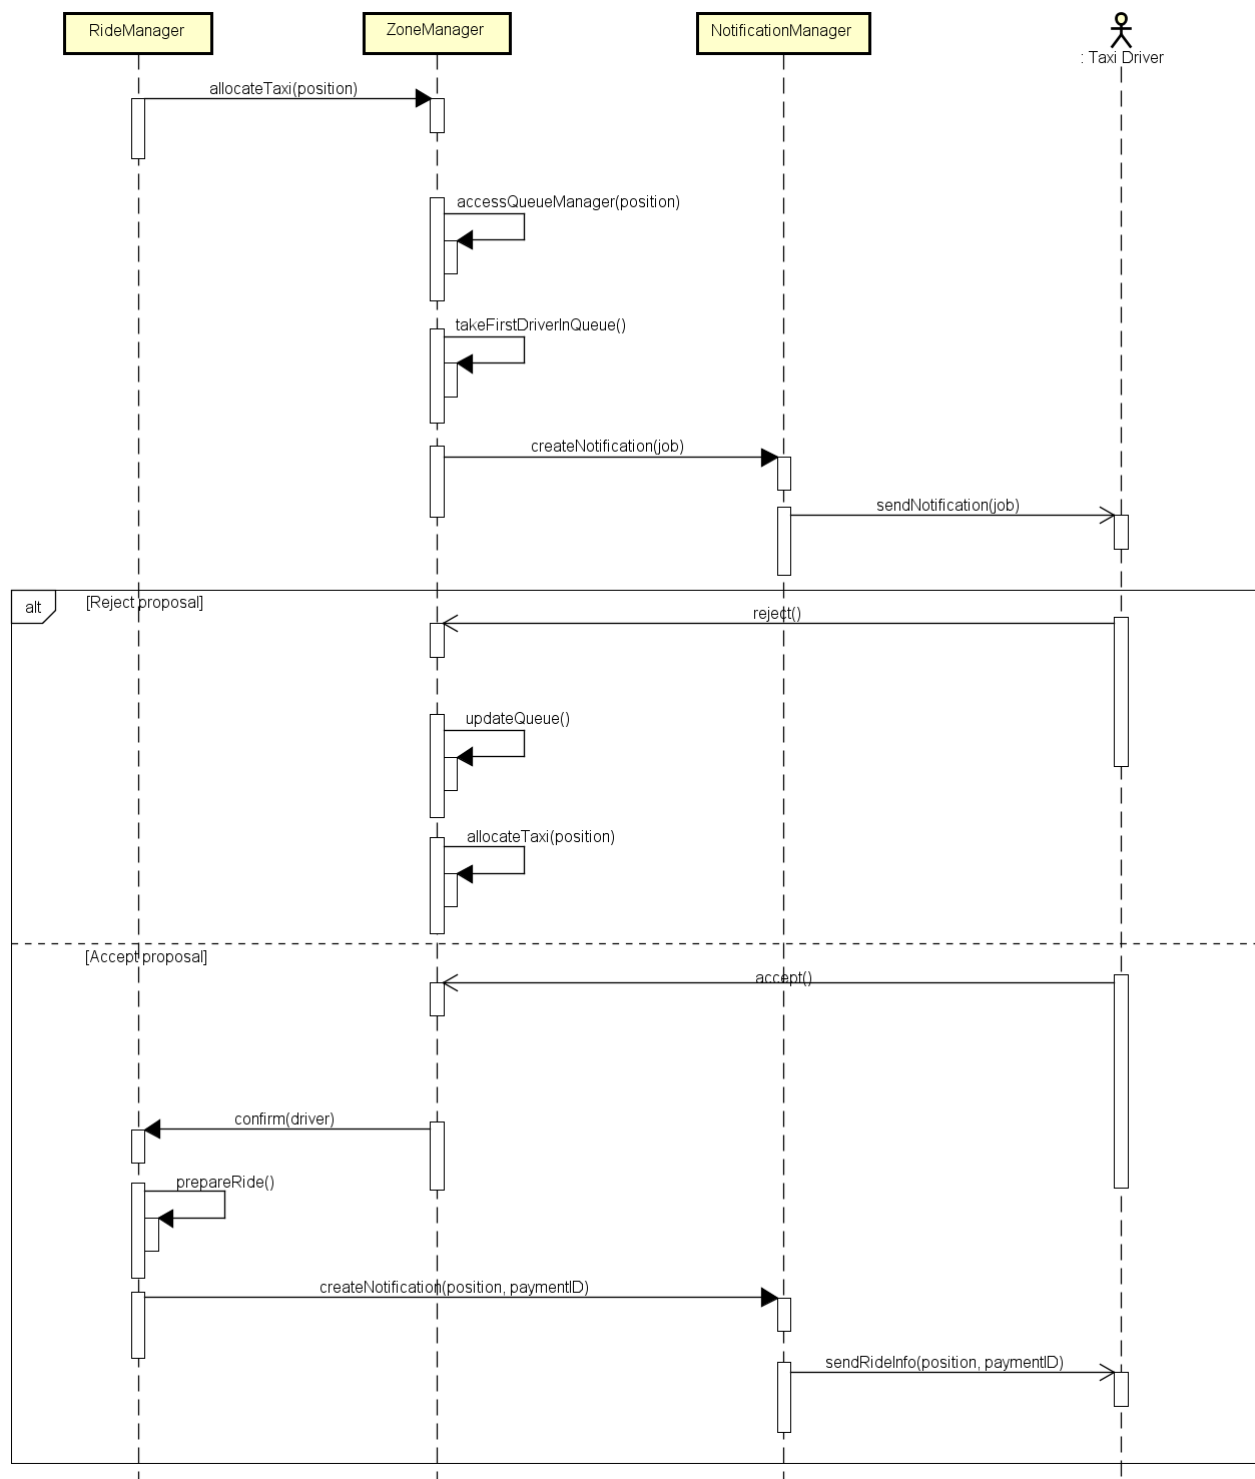

Figure taken from paragraph 2.5.2.4 of the DD

Test procedure identifier	TP8
---------------------------	-----

## 4 Tools and Test Equipment Required

Mockito, Arquillian, JMeter

## **5 Program Stubs and Test Data Required**
